

# Cambian Group

## Case Study

Cambian Group, one of the UK's leading providers of specialist services in education and care, mental health and learning disabilities approached Coverad with a problem that needed their specialist advice and manufacture.

One of Cambian's CAMHS tier 4 service properties, which previously had Coverad's competitors radiator covers installed were having serious issues where the current covers were being vandalised and removed from the wall. This was causing extreme concern within, not only the property itself but, the group.

Cambian's Senior Estates Manager, Glen Sowerby, liked the design of Coverad's New Truly Anti-Ligature Radiator Cover with its mesh design punched into the cover, ensuring that there are no major welds, inserts to break away from the cover or no hole exceeding 2mm in diameter.

However, they were concerned that even the sturdy 2mm steel that the cover was manufactured from may not be enough in the most challenging areas within the home.

Using Coverad's experience and their own manufacturing plant, an additional 1.5mm bracing structure was added to the inside of the 2mm cover making the final product a whopping 3.5mm thick allowing it to take the weight of an adult jumping on it whilst the cover was laying on the floor! The covers were also manufactured with external rebates for additional fixing points and installed with the usual internal fixings that all Coverad radiator covers incorporate.

The end result was extremely impressive and Glen Sowerby commented 'these covers are perfect for the clients we look after. Going forward all my units will have those covers fitted'.
