

Anti-Ligature Radiator Covers

Coverad's unique secure radiator cover incorporating the TRULY ANTI-LIGATURE punched mesh design. Punching perforations into the cover ensures there are no weak spots or potential for service users to detach or remove the mesh to create a ligature point.

Ligature points in Hospitals have been highlighted as a major concern; with Coverad's Secure range you need not worry.

Coverad has more than 25 years experience in the industry and are always at the forefront of design, working with our customers to ensure every need is met.

Quatro House
Lyon Way
Frimley Road
Camberley
Surrey
GU16 7ER

Features:

- Manufactured from 2mm heavy gauge, anti-vandal steel
- 2mm punched perforations to meet with anti-ligature guidance
- Internal wall and floor fixings
- Resistant to impact and aggressive behaviour
- Radius Edges - no sharp corners
- Class 0 Fire Rated
- Independently tested by BSRIA

Due to inconsistencies in walls and floors, to make Coverad's completely anti-ligature, anti-pick mastic needs to be applied between the cover and wall/floor. This can cause complications in the future with cleaning and maintenance. Coverad have designed their removable front panel, secured with fixings to your specification, ensuring that this does not become a problem.

Options:

- Square, 30 degree and 45 Degree Sloping Tops
- Removable front access panel for cleaning/maintenance
- External Anti-ligature Shrouded TRV's
- Small TRV access for internal TRV's
- Multiple fixing options - Allen key, Pin and Star, etc.
- Standard RAL9010 - other colours available
- Anti-microbial paint option
- Bespoke Designs to fit your requirements
